

BATH – NEXT LEVEL

NOTICEABLE QUALITY. VISIBLE PERFECTION

MANY TRADES, ONE SOLUTION

How many interfaces does a bathroom need?

Thanks to our innovative, modular bathroom solutions, numerous trades are covered in a single step. Electrical, heating, screed, tiling, carpentry and many other skilled trades are rendered superfluous by our perfectly prefabricated

modules. This saves you valuable time and money, while at the same time benefiting from the highest precision and quality.

heating installation

FACTS, THAT SPEAK FOR THEMSELVES!

Efficiency, cost certainty and labour savings!

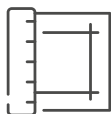

Absolutely sealed assembly

The ECOfloor floor element combines the shower floor and seal to form a completely watertight unit. In combination with the prefabricated Ecowall wall element, this creates a watertight solution.

Just-in-time delivery

Through precise just-in-time delivery, we optimise the construction process and set new standards in construction time – efficiently, predictably and without delays.

Particularly space-saving

Thanks to its special design, the module requires 5% less space. The new constitutive design ensures more efficient use of space without compromising on comfort or functionality.

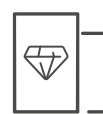

Perfect dimensional accuracy

CAD machine manufacturing ensures fully automatic cutting with unrivalled precision. This advanced technology guarantees the highest quality and ensures a perfect fit.

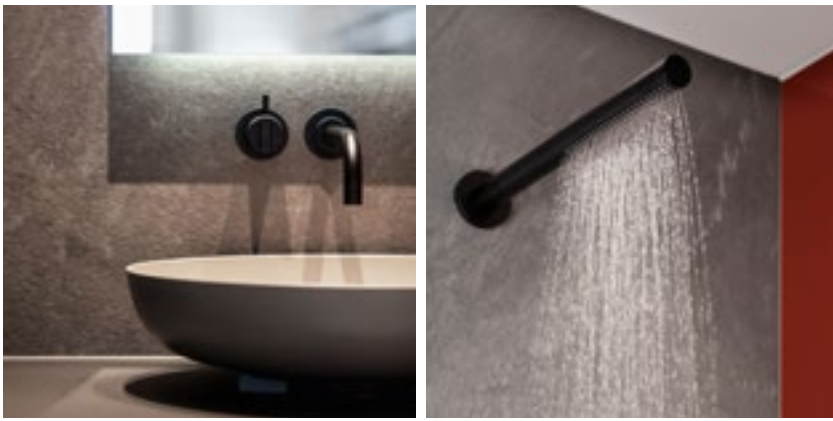

Absolute cost certainty

All components are precisely matched to each other, avoiding unexpected costs due to rework or delays.

High-quality, joint-free ceramic walls

Ceramic is abrasion-resistant, completely scratch-proof, break-proof and easy to clean – for a permanently flawless appearance and maximum hygiene.

Exclusive design – down to the last detail

Highest design standards – from custom-made niches and elegant ceramic basins to a harmonious lighting concept. All details are perfectly coordinated.

Sound & condensation exclusion

All water and drainage outlets are soundproofed in a pre-insulated insulating body and are completely condensation-proof. The wall penetrations are also subject to these requirements with the construction sleeve technology.

Everything integrated on request

Additional fixtures such as floor distributors, electrical distributors or room exhaust air systems are seamlessly integrated into the prefabricated module. This ensures a compact, efficient and perfectly coordinated installation.

Integrated string system

Both the interconnecting pipes for the technical equipment and the pipe fire protection in the ceiling area can be integrated. All pipes are encased in a sheet steel jacket with PUR insulation material, filled with foam to eliminate cavities, and fixed in place with sound insulation.

Complies with all building regulations

Our products comply with all relevant building regulations and standards, thus offering maximum safety and quality.

Free of unnecessary construction chemicals

Our solution requires a minimum of construction chemicals. Tile adhesive is not necessary! This ensures cleaner processing, fewer emissions and an environmentally friendly construction method.

Absolutely leak-proof pipe system

The fully embedded pressure and drainage pipe system is prefabricated at the factory and guarantees maximum tightness – without additional sealing work on site.

Flexible and sustainable

Our modular systems are reversible and can be easily dismantled if required – ideal for homes, offices or temporary use.

THREE ELEMENTS – 1 PERFECT UNIT

Three perfectly coordinated components.

installation wall

These high-quality prefabricated elements are all-rounders. All necessary trades with all interfaces resolved are combined here in an absolutely high-quality unit, thus contributing to space-saving, worry-free, sustainable and long-lasting use.

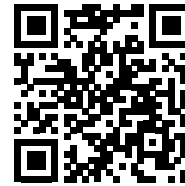

ECOfloor –
The floor element

The innovative ECOfloor floor element combines shower floor and waterproofing in a single element.

ECOWall –
The wall element

The ECOWall wall element with large ceramic tiles has integrated sealing and is perfectly prefabricated, including all necessary cut-outs.

NEW BUILDING

RENOVATION

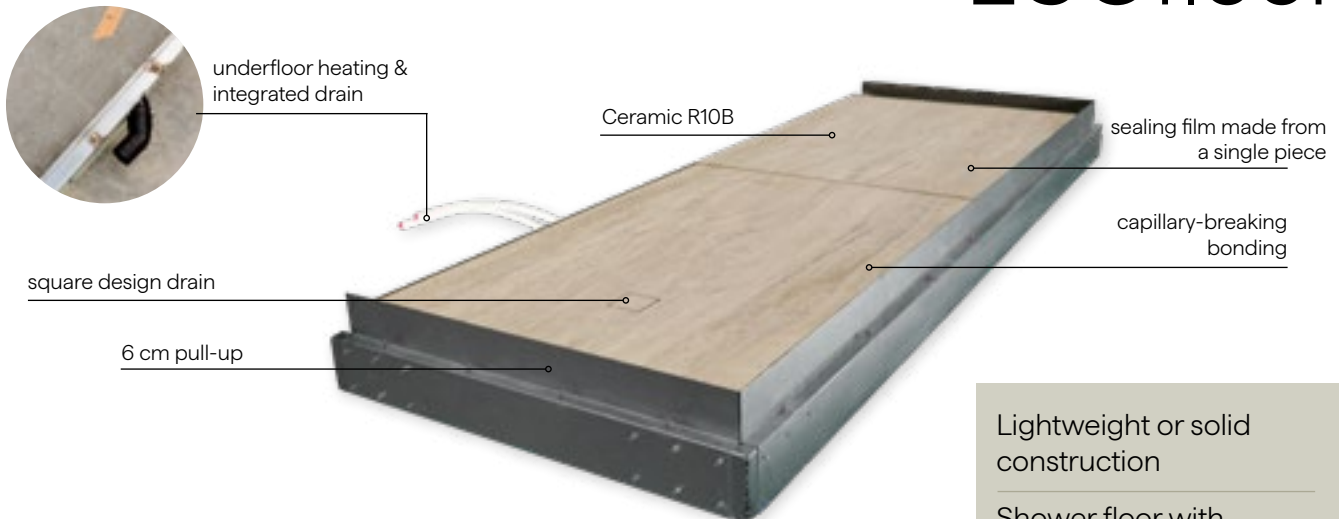

SERIAL PRODUCTION

Our modular components – Ecofloor, Ecowall and the installationwall – are revolutionising bathroom construction! They enable a complete bathroom to be built in just 8 hours – without the need for a multitude of trades. We distinguish between kits and

prefabricated bathrooms: both are suitable for new builds, while the kit is ideal for renovations and the prefabricated bathroom is designed for serial production. A quantum leap in bathroom design!

ECOfloor

The ECOfloor floor element combines shower floor and drainage in one system. The well-designed floor construction in combination with large ceramic tiles ensures a completely watertight solution – without secondary drainage.

The slip resistance class is fully complied with. The square design drain integrates seamlessly into the lowered drain area and is flush-mounted in the shower tray – for an elegant and functional solution.

Lightweight or solid construction

Shower floor with 4-sided slope

Integrated underfloor heating

Complies with all building regulations and standards

ECOWall

The Ecowall wall element is perfectly prefabricated, so no construction chemicals are required on site. The use of large ceramic tiles creates a particularly high-quality, seamless appearance. This innovative wall solution saves valuable time

while ensuring a durable, waterproof wall construction. Ceramic is also abrasion-resistant, completely scratch-proof, break-proof and easy to clean – for a permanently flawless appearance and maximum hygiene.

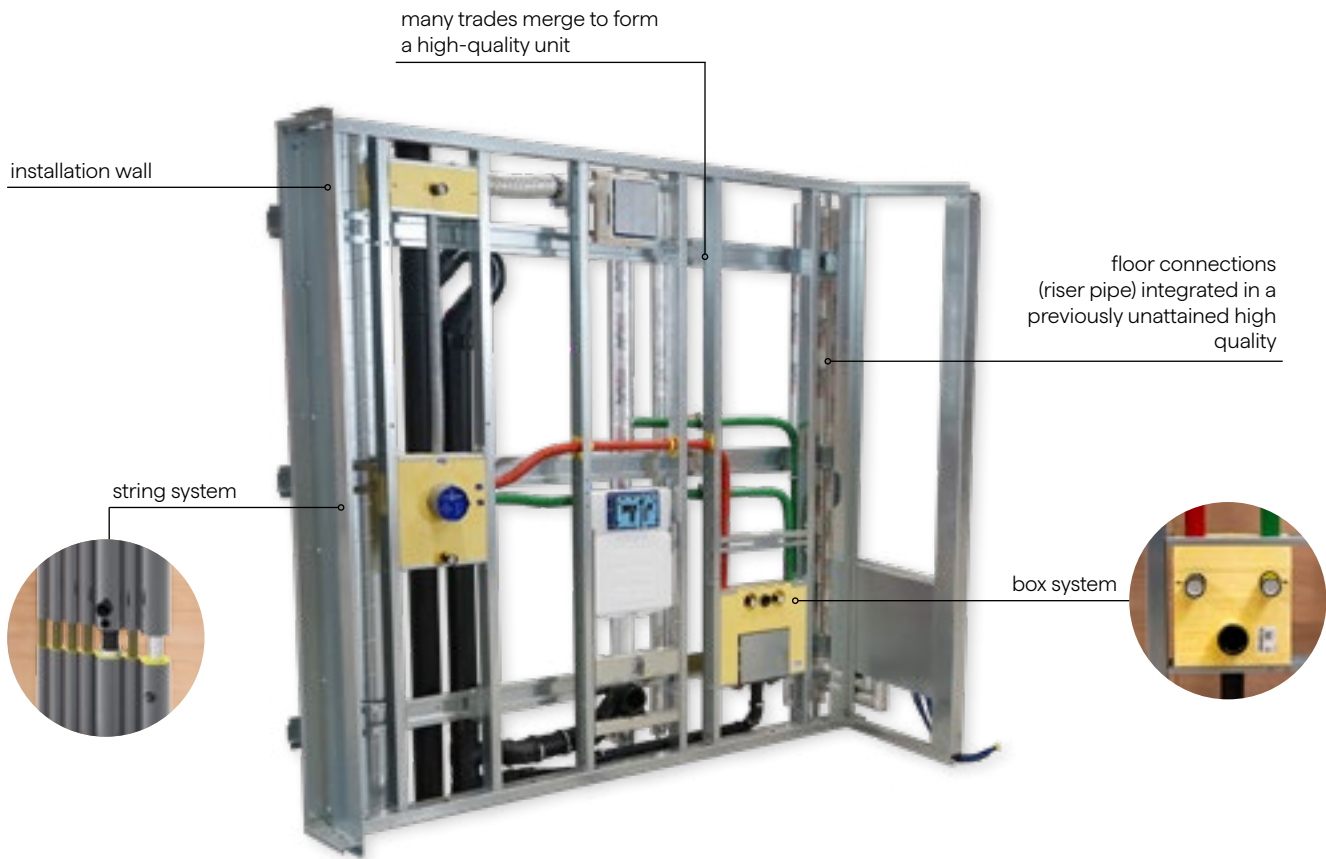

No construction chemicals required

No drying times

No balancing

Perfectly prefabricated

super quick installation

installation wall

A CAD-designed, laser-formed aluminium/steel construction forms the lightweight, space-saving basic framework. All water-carrying components are embedded in a special insulating body – for fixed fittings, optimum sound insulation and protection

against mould and condensation. Innovative multi-storey pipe string technology can be integrated. All piping, fittings, device mountings and electrical cabling are leak-tested and designed in accordance with standards.

Combines numerous trades in one place

High-quality and sustainable design

Space-saving and time-efficient during the construction phase

Maximum quality – even behind the tile

Sound-insulated, condensation-proof, secure device mountings

TAILOR-MADE SOLUTIONS FOR BATHROOM DESIGN OF THE FUTURE.
